

- I agree to restrict my use of EUCLEIA model output to non-commercial research and educational purposes only. Results from non-commercial research are expected to be made generally available through open-access publication and must not be considered proprietary. Materials prepared for educational purposes cannot be sold. These restrictions may only be relaxed by permission of the individual modelling groups responsible for the simulations.
- I will hold no individual(s), organization(s), or group(s) responsible for any errors in the models or in their output data.
- In publications that rely on the EUCLEIA model output, I will appropriately credit the data providers by an acknowledgement similar to the following: "We acknowledge the EUCLEIA project funded by the European Commission through the Seventh Framework Programme for Research under Grant Agreement 607085".
- I acknowledge the potential limitations of the data obtained from this archive. These may include (but are not necessarily limited to) errors in the model, shortcomings in the experiment designs, the conjectural quality of the forcing scenarios used to drive the model, and so on.
- I understand that although the model output has been subjected to a quality control procedure, unrecognized errors almost certainly remain.
- To aid participating groups in understanding and improving upon their models behaviours, I will respond to reasonable requests from the EUCLEIA project for feedback about my research results based on EUCLEIA data (e.g., reporting model deficiencies, recording EUCLEIA publications, etc.).
- Although I may freely share downloaded EUCLEIA data with close collaborators, I understand that I may not redistribute the data more widely before the end of the EUCLEIA project (December 2016).
